SUMMARY

Backend developer with 2+ years of experience building and maintaining applications in C#/.NET and Java across enterprise software, iGaming and Salesforce. Supported a U.S. client's production C# web application, designed math models and game logic for online slot games, and built two ASP.NET Core projects: a restaurant management system used at live events and an AI-powered recruiter matching tool built on the OpenAI API. Open to on-site, hybrid and remote roles.

SKILLS

Languages: C#, Java, SQL, JavaScript, HTML, CSS

Frameworks & APIs: ASP.NET Core MVC (.NET 8), RESTful APIs, React, Authentication & Authorization (RBAC, claims-based)

Databases & Tools: MySQL, Microsoft SQL Server, Git, GitHub, Docker, Postman, Railway

AI & Platforms: OpenAI API (JSON mode), Prompt-based integrations, Secure API key handling, Salesforce

EXPERIENCE

Self-improvement — Spanish Language Course, SpeakEasy Spanish School, Barcelona, Spain | Oct 2025 – May 2026

- Spanish language course; reached B2 level (CEFR).

Wicked Games — Backend / Math Developer | Feb 2025 – Oct 2025

- Designed math models and game rules for online slot games, including payout logic, RTP and volatility.
- Implemented game logic and backend functionality in Java.
- Kept game math within legal and regulatory requirements while balancing mechanics for an engaging player experience.

Quadro Consulting — Backend Developer | Jan 2024 – Dec 2024

- Developed new features for an enterprise Java application and helped define how system components integrate.
- Moved to a U.S. client project, maintaining and extending their production C# web application, including front-end changes in C#, HTML and JavaScript.
- Investigated and resolved production issues, including hard-to-reproduce bugs, keeping the application stable.

Kameleon Solutions — Salesforce Developer (Internship) | Sep 2022 – Feb 2023

- Developed components for client Salesforce orgs and supported senior developers with development and administration tasks.

PROJECTS

Recruiter Scanner — AI-Powered Recruiter Matching & Outreach Tool

C# · .NET 8 · ASP.NET Core MVC · OpenAI API · CsvHelper · JavaScript · Docker

- Built a web app that scores recruiters and companies against a candidate's CV using the OpenAI API in JSON mode, returning a 1–10 match score with reasoning, strengths and weaknesses.
- Generates editable email and LinkedIn outreach drafts per recruiter; imports recruiter lists from CSV (CsvHelper) and JSON with validation and clear error messages.
- Analyzes recruiters in parallel with limited concurrency and a real-time progress bar; refactored a shared OpenAI service base class (typed HttpClient, auth, response parsing), cutting compiler warnings from 94 to 0 and HTML-escaping AI output to prevent XSS.

GitHub: github.com/markokeser/Recruiter-Scanner | **Live demo:** recruiter-scanner-production.up.railway.app

Zubac-Matine — Restaurant Management System

ASP.NET Core MVC · C# · MySQL · Docker · Railway

- Built an end-to-end web app for managing orders, tables and billing; used at live events to track tables, drinks and shared bills in real time.
- Implemented authentication, authorization and role separation using claims-based RBAC, and designed the MySQL schema with optimized queries for daily operational use.
- Containerized the app with Docker and deployed it to Railway; added error handling for stability during live use.
